The invention relates to an isolated antibody (Ab), and its functional fragments, that bind to human insulin-like growth factor-1 receptor (IGF-IR) and optionally: (i) inhibit natural binding of insulin-like growth factors (IGF)-1 and/or-2; and/or (ii) inhibit specifically tyrosine kinase activity of IGF-IR. Ab and its fragments are used to prevent or IGF-IR and/or epidermal growth factor receptor (EGFR) and/or with hyperactivity of signal transduction pathways mediated by interaction of transformation of summal calls to tumor cells, inhibit growth and/or proliferation of tumor cells, so are useful against cancers of the prostate. Jung, breast, andometrium and colon, also osteosarcoma, and also for treating psoriaais. A bare a lso used to diagnose diseases caused by abnormal expression of IGF-IR and/or EGFR. This sequence represents a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              neoplasm; prostate tumor; andrology; genitourinary disease; osteosarcoma; musculoskeletal disease; respiratory disease; lung tumor; endocrine disease; gynecology and obstetrics; breast tumor; endometroid carcinoma; gastrointestinal disease; colon tumor; antipsoriatic; psoriasis; dermatological disease; immune disorder; immunoglobulin; heavy chain variable region.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Murine immunoglobulin heavy chain variable region 7C10 VH SEQ ID NO:52.
New antibodies that bind to human insulin-like growth factor receptor, useful for treatment, prevention and diagnosis of cancers.
                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

The invention relates to a novel isolated anti-insulin-like growth factor capable of capable of binding to human 10F-1R and, if necessary, capable of capable of binding to human 10F-1R and, if necessary, capable of specifically inhibiting tyroshie kinase activity of the receptor, capable of specifically inhibiting tyroshie kinase activity of the receptor, comprising a light or heavy chain having at least one complementary determining region (CDR) consisting of one of two fully defined 16 amino acids (ADSG7006 and ADSG7004). An antibody of the invention is useful in activation of a medicament intended for the prevention or treatment of an illness connected with an overexpression and/or an abnormal activation of the IGF-IR and/or EGFR, and/or connected with a mediated by the interaction of the IGF-IR and/or EGFR, and/or of EGF with EGFR, where continues secondary effects connected with inhibition of the Insulin receptor. The antibody is useful for preparation of a medicament intended to interacter, preferably IGF-dependent and/or IER2/neu-dependent cells with tumoral contended for preparation of a medicament intended to Inhibit the growth and/or the proliferation of a medicament intended to inhibit the growth and/or the proliferation of a medicament intended for prevention or for the treatment of cancer, where the cancer, endometrial cancer or colon cancer. (I) is useful in the preparation of a medicament intended for prevention or for the treatment of soriasis. (I) is useful in the preparation of a medicament intended for the prevention or for the present of preparation of a medicament intended for the presention of a medicament of psoriasis. (I) is useful in preparation of a medicament intended for prevention or for the treatment of psoriasis. (I) is useful in preparation of a medicament intended for the specific targeting of a biologically and/or EGFR receptor. (I) is useful in preparation of a medicament intended for the specific targeting of a biological will in the preparation of a medicament intended for t

```
The invention relates to an isolated antibody (Ab), and its functional fragments, that bind to human insulin-like growth factor-1 receptor (IGF-IR) and optionally: (i) inhibit natural binding of insulin-like growth factors (IGF)-1 and/or -2; and/or (ii) inhibit specifically tyrosine kinase activity of IGF-IR. Ab and its fragments are used to prevent or treat diseases associated with overexpression and/or abnormal activity of IGF-IR and/or expiression and/or abnormal activity of theyeractivity of signal transduction pathways mediated by interaction of these receptors with their ligands. Especially they inhibit growth and/or proliferation of tumor cells, so are useful against cancers of the prostate, lung, breast, endometrium and colon, also osteosarcoma, and also for treating psoriasis. Ab are also used to diagnose diseases caused by abnormal expression of IGF-IR and/or EGFR. This sequence represents a
                                                                                         insulin-like growth factor-1 receptor; IGF-IR; tyrosine kinase activity; or epidermal growth factor receptor; EGFR; signal transduction pathway; ligand; tumor; cancer; osteosarcoma; complementarity determining region;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New antibodies that bind to human insulin-like growth factor receptor, useful for treatment, prevention and diagnosis of cancers.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to an isolated antibody (Ab), and its functional fragments, that bind to human insulin-like growth factor-1 receptor (IGF). This and optionally: (i) inhibit natural binding of insulin-like growth factors (IGF)-1 and/or -2; and/or (ii) inhibit specifically tyrosine kinase activity of IGF-1R. Ab and its fragments are used to prevent or treat diseases associated with overexpression and/or abnormal activity of IGF-1R and/or epidermal growth factor receptor (EGFR) and/or with hyperactivity of signal transduction pathways mediated by interaction of these receptors with their ligands. Especially they inhibit the profiferation of normal cells to tumor cells, inhibit growth and/or proliferation of tumor cells, so are useful against cancers of the prostate, lung, breast, endometrium and colon, also osteosarcoma, and also for treating psoriais. Ab are also used to diagnose diseases caused also contracted to the contraction of the property of the profit of the contraction of the prostate in the colon, also osteosarcoma, and the contraction of the profit of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contracti

                                                                                                                                                                                                                                                                                                                                     The invention relates to an isolated antibody (Ab), and its functional fragments, that bind to human insulin-like growth factor-1 receptor (IGF-18) and optionally: (i) inhibit natural binding of insulin-like growth factors (IGF)-1 and/or -2; and/or (ii) inhibit specifically tyrosine kinase activity of IGF-1R. Ab and its fragments are used to prevent or IGF-18 and/or epidermal growth factor receptor (EGFR) and/or with hyperactivity of signal transduction pathways mediated by interaction of transformation of signal transduction pathways mediated by interaction of transformation of townor cells, so are useful against cancers of the profetate, ung, breast, andometrium and colon, also osteosarcoma, and also for treating psorianis. Ab are a sloo used to diagnose diseases caused by abnormal expression of IGF-1R and/or EGFR. This sequence represents a
                                                                                                                                                                                                                                                 New antibodies that bind to human insulin-like growth factor receptor, useful for treatment, prevention and diagnosis of cancers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     **MEDLINE=22354719; PubMed=12466555; DOI=10.1093/nar/gkf667; Sasaki Y., Ishikawa J., Yamashita A., Oshima K., Kenri T., Furuya K., Sasaki Y., Ishikawa J., Yamashita A., Oshima K., Kenri T., Furuya K., Yoshino C., Horino A., Shiba T., Sasaki T., Hattori M.; The complete genomic sequence of Mycoplasma penetrans, an intracellular bacterial pathogen in humans."; Intracellular bacterial pathogen in humans."; Nucleic Acida Res. 30:5293-5300 (2002).

1. Intracellular bacterial pathogen in humans."; Phosphodiester bonds at apurinic or apyrimidinic sites (AP sites) phosphodiester bonds at apurinic or apyrimidinic sites (AP sites).

1. FUNCTION: Endonuclease IV plays a role in DNA repair. It cleaves to produce new 5' ends that are base-free decayribose 5-phosphate residues. It preferentially attacks modified AP sites created by bloomycin and neocarzinostatin (By similarity).

2. CATALYTIC ACTIVITY: Endonucleolytic cleavage to 5'-phosphooligonucleotide end-products.

3. C. I. COFACTOR: Binds 3 zinc ions (By similarity).

2. I. SIMILARITY: Belongs to the AP endonuclease 2 family.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

US-00-804-444A-50
is Sequence 50. Application US/08804444A
is Patent No. 6117980
is GRUERAL INFORMATION:
is APPLICANT: Gonzalez, Tania N
APPLICANT: Leong, Steven R.
is APPLICANT: Presta, Leonard G.
TITLE OF INVENTION: Humanized Anti-IL-8 Monoclonal Antibodies
NUMBER OF SEQUENCES: 61
CORRESPONDENCE ADDRESS:
ADDRESSE: Genentech. Inc.
STREET: 1 DNA Way
CITY: South San Francisco

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

(FABR ) FABRE MEDICAMENT SA PIERRE.

Leger O; Corvaia N, Goetsch L,

WPI; 2003-569653/53. N-PSDB; ADJ76845. New antibodies that bind to human insulin-like growth factor receptor, useful for treatment, prevention and diagnosis of cancers.

Claim 1; SEQ ID NO 12; 164pp; French.

The invention relates to an isolated antibody (Ab), and its functional fragments, that bind to human insulin-like growth factor-1 receptor (IGF-IR) and optionally: (i) inhibit natural binding of insulin-like growth factors (IGF)-1 and/or -2; and/or (ii) inhibit specifically tyrosine kinase activity of IGF-IR. Ab and its fragments are used to prevent or treat diseases associated with overexpression and/or abnormal activity of IGF-IR and/or epidermal growth factor receptor (EGFR) and/or with

```
ö
             these receptors with their ligands. Especially they inhibit transformation of normal cells to tumor cells, inhibit growth and/or proliferation of tumor cells, so are useful against cancers of the prostate, lung, breast, endometrium and colon, also osteosarcoma, and also for treating psoriasis. Ab are also used to diagnose diseases caused by abnormal expression of IGF-IR and/or EGFR. This sequence represents an CDR sequence used to generate the Ab of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a novel isolated anti-insulin-like growth factor I receptor (IGF-IR) antibody (I) or its functional fragment, being capable of binding to human IGF-IR and, if necessary, capable of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Insulin-like growth factor 1 receptor; antibody; tumor; cytostatic; neoplasm; prostate tumor; andrology; genitourinary disease; osteosarcoma; musculoskeletal disease; respiratory disease; lung tumor; endocrine disease; gynecology and obstetrics; breast tumor; endometroid carcinoma; gastrointestinal disease; colon tumor; antipsoriatic; psoriasis; dermatological disease; immune disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel isolated anti-insulin-like growth factor I receptor (IGF-IR) antibody or its functional fragment, being capable of binding human IGF-IR and specifically inhibiting tyrosine kinase activity of receptor, useful for treating cancer.

comprising a light or heavy chain having at least one complementary determining region (CDR) consisting of one of two fully defined 16 amino acids (AD267006 and AD267014). An antibody of the invention is useful in the preparation of a medicament intended for the prevention or treatment of the preparation of a medicament intended for the prevention or treatment of activation of the IGF-IR and/or Connected with a noverexpression and/or an abnormal activation of the IGF-IR and/or EGFR, and/or connected with a horeration of the IGF-IR and/or of EGFR, and/or of EGFR, where the administration of the ransduction pathway of the signal mediated by the induces secondary effects connected with inhibition of the insulin creeptor. The antibody is useful for preparation of a medicament intended to inhibit the transformation of nor of normal colls with tumoral character, preferably IGF-dependent, especially IGF-dependent and/or IGFI and/or IGF2-dependent and/or EGFR dependent and/or IGFI and/or IGFI-dependent and/or IGFI-dependent and/or IGFI-dependent and/or IGFI-dependent and/or IGFI-dependent and/or IGFI-dependent calls. (I) is useful in the preparation of a medicament intended for prevention or for the treatment of cancer, endometrial cancer or colon cancer. (I) is useful in the preparation of a medicament intended for the prevention or for the treatment of postiasis. (I) is useful in preparation of a medicament intended for the specific targeting of a biologically active compound to treatment of postiasis. (I) is useful in preparation of a medicament intended for invitro diagnosis of illnesses induced by an overexpressing the IGF-IR and/or EGFR receptor is useful in which the abnormal presence, of IGF-IR and/or EGFR receptor is suspected, which involves contacting the contact is used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Epitope, EBV, cytotoxic T cell; lymphocyte; vaccine; immunisation; CD8+.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
specifically inhibiting tyrosine kinase activity of the receptor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ;

                                                                                                                                                                                                                                   ö
                                                                                                New cytotoxic T-cell epitopes of Epstein-Barr virus have been isolated and purified (AAR80017-R80028). Variants of these epitopes have also been identified (AAR80019-R80038). The epitopes are small, stable peptides whose manufacture does not involve use of any infectious material. The epitopes may be used as components of subunit vaccines to induce cytotoxic T lymphocytes in a subject. The vaccines are partic, useful against viral infections where CD8+ cytotoxic T lymphocytes are protective. (Updated on 25-MAR-2003 to correct PI field.) (Updated on 16-OCT-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                for induction of cytotoxic T cells - comprising CTL epitope and cone antigen, in a water in oil formulation.

The vaccine produced comprises or encode at least one antigen (AAW40847-W40876) to which the individual valid mount an anamestic response, e.g. a tetanus toxoid, diphtheria toxoid, Bordetella pertussis antigen, poliovirus antigen, purified protein derivative, glycoprotein 350 protein, and/or helper epitope
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This amino acid sequence is a cytotoxic Epstein-Barr virus (EBV) T-cell epitope of the EBV nuclear antigen 3A (BENA3A), which binds the human leukocyte antigen acceptor 24 (HLA 24). It is used to prepare a vaccine which may include the cytotoxic EBV T-cell epitope (AAW40828- AAW40846).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Herpes simplex virus type 4; Epstein-Barr virus; EBV; cytotoxic;
T-cell epitope; nuclear antigen; human leukocyte antigen; HLA; vaccine;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Cytotoxic Epstein-Barr virus T cell epitope - useful to prepare vaccine
individual will mount an anamnestic response, and at least one cytotoxi T cell (CTL) epitope can be used to induce CD8+ CTL cells in a vaccine, where the CTL epitope is known. The antigen is a diphtheria toxoid, a pertussis or poliovirus antigen, a helper epitope or esp. a tetanus toxoid, and the CTL epitope is 1 of the Epstein-Barr virus derived peptides AAR84898-910. (Updated on 27-AUG-2003 to correct OS field.)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention describes a method of inducing and/or sustaining an immunological cytotoxic T lymphocyte (CTL) response in a mammal. The method comprises: (a) delivering an antigan to the mammal at a level to induce an immunological CTL response in the mammal; and (b) maintaining the level of the antigan in the mammal's lymphatic system to maintain the immunologic CTL response. The method can be used for the delivery of e.g. a differentiation antigen, a tumour-specific multilineage antigen, an embryonic antigen, an oncogene antigen, a mutated tumour-suppressor gene antigen, or a viral antigen. They can be used for the treatment of antigen, or a viral antigen. They can be used for the treatment of antigen, or a viral disease such as hepatitis or AIDS. Sustained antigen delivery to the lymphatic system provides for potent CTL stimulation that takes contain the milieu of the lymphoid organ, and it sustains stimulation that is necessary to keep CTL active, cytotoxic and recirculating through the body. The present invention describes a method of inducing and/or sustaining an immunological cytotoxic T lymphocyte (CTL) response in a mammal. The method comprises: (a) delivering an antigen to the mammal The a level to induce an immunological CTL response in the mammal; and (b) maintaining the level of the antigen in the mammal is lymphatic system to maintain the immunologic CTL response. The method can be used for the delivery of e.g. a differentiation antigen, a tumour-specific multilineage antigen, an oncogene antigen, a mutated tumour-suppressor gene entigen, or a viral antigen. They can be used for the treatment of antigen, or a viral antigen. They can be used for the treatment of cleases such as cancer, e.g. malignant melanoma or infectious disease, c.g. viral disease such as hepatitis or AIDS. Sustained antigen delivery to the lymphatic system provides for potent CTL stimulation that takes place in the milieu of the lymphoid organ, and it sustains stimulation that is necessary to keep CTL active, cytotoxic and recirculating through the body. AAY10071 to AAY10639 represent examples of peptide antigens
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                               Inducing a cytotoxic T lymphocyte response - by maintaining a level of antigen in the lymphatic system of a mammal so as to provide a sustained CTL response, used to treat, e.g. AIDS.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ઠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a method of inducing and/or sustaining an immunological cytotoxic T lymphocyte (CTL) response in a mammal comprising administering directly to the lymphatic system of the mammal: (a) an antigen in the form of a polypeptide; (b) a vector comprising a nucleic acid encoding the antigen; or (c) a non-peptide antigen. The nucleic acid encoding the antigen, or (c) a non-peptide antigen. The retrieval is particularly useful for treating a mammal having a malignant tumour (e.g. carcinoma, melanoma, leukaemia or lymphoma) or infectious clasease (e.g. heparlis, acquired immune deficiency syndrome (AIDS), malaria, measles or tuberculosis), or in an animal having a cats, mice, predisposition to these diseases. The mammal may be dogs, cats, mice, cattle, sheep, pigs, goats, rabbits, or preferably humans. ABG79753-ABG8031 represent viral epitopes on major histocompatibility complex (MHC) class I molecules, used in the method of the invention. (Updated on 29-AUG-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Major histocompatibility complex; MHC; MHC class I molecule; virus; epitope; cytotoxic T lymphocyte response; CTL response; lymphatic system;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Inducing or sustaining immunological cytotoxic T lymphocyte response in a mammal, useful for treating a mammal with malignant tumor or infectious disease, by directly administering an antigen to the lymphatic system of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Inducing or sustaining immunological cytotoxic T lymphocyte response in a mammal, useful for treating a mammal with malignant tumor or infectious disease, by directly administering an antigen to the lymphatic system of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             6
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        epitope liberation; substrate; proteasome; cytostatic; antibacterial; protozoacide; fungicide; T-cell activator; vaccine; housekeeping epitope; cytotoxic T lymphocyte; CTL; adoptive immunotherapy; neoplastic cell; virus; bacterium; protozoan; fungus; housekeeping proteasome system.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a method of inducing and/or sustaining an immunological cytotoxic T lymphocyte (CTL) response in a mammal comprising administering directly to the lymphatic system of the mammal: (a) an antigen in the form of a polypeptide; (b) a vector comprising a nucleic acid encoding the antigen; or (c) a non-peptide antigen. The method is useful for inducing and/or sustaining CTL response in a mammal. This is particularly useful for treating a mammal having a malignant
antigen; immunogenic; malignant tumour; carcinoma; melanoma; leukaemia; lymphoma; infectious disease; hepatitis; malaria; measles; tuberculosis; acquired immune deficiency syndrome; AIDS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              tunour (e.g. carcinoma, melanoma, leukaemia or lymphoma) or infectious disease (e.g. hepatitis, acquired immune deficiency syndrome (AIDS), malaria, messles or tuberculosis), or in an animal having a predisposition to these diseases. The mammal may be dogs, cats, mice, cattle, sheep, pigs, goats, rabbits, or preferably humans, ABG79753-ABG80191 represent viral epitopes on major histocompatibility complex (MHC) class I molecules, used in the method of the invention. This invention relates to a novel method of identifying a polypeptide suitable for epitope liberation, including the steps of identifying an epitope of interest; providing substrate polypeptide sequence including the epitope, wherein the substrate permits processing by a proteasome; contacting the substrate with a composition including the proteasome; and assaying for liberation of epitope. The invention may be useful for the development of compounds with a cytostatic, antibacterial, the development of compounds with a cytostatic, antibacterial, addition, the invention may allow development of a vaccine. The invention is useful for identifying a polypeptide suitable for epitope liberation, where the epitope is a housekeeping epitope. The compositions comprising the identified housekeeping epitopes are useful in vitro in vaccine the identified housekeeping epitopes are useful in vitro in vaccine corrupts, bacterium, protozoan or fungus. CTL epicopes are identified based on the knowledge that such epitopes are; in fact, produced by the control knowledge that such epitopes are, in fact, produced by the chousekeeping proteasome system. Once identified, these epitopes, embodied as peptides, can be used to successfully immunise or induce therapeutic CTL responses against housekeeping proteasome expressing target cells in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 epitope liberation; substrate; proteasome; cytostatic; antibacterial; protozoacide; fungicide; T-cell activator; vaccine; housekeeping epitope; cytotoxic T lymphocyte; CTL; adoptive immunotherapy; neoplastic cell; virus; bacterium; protozoan; fungus; housekeeping proteasome system.
                                                                                                                                                                                                                                                                             Identifying polypeptide suitable for epitope e.g., housekeeping epitope, liberation by contacting substrate polypeptide comprising epitope of interest, with proteasome, and assaying for liberation of epitope.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     .

This invention relates to a novel method of identifying a polypeptide suitable for epitope liberation, including the steps of identifying an epitope of interest, providing substrate polypeptide sequence including the epitope, wherein the substrate permits processing by a proteasome; contacting the substrate bermits processing by a proteasome; contacting the substrate by encessing of the substrate by proteasome; and assaying for liberation of epitope. The invention may be useful for the development of compounds with a cytostatic, antibacterial, protozoacide or fungicide activity acting as T-cell activators. In caddition, the invention may allow development of a vaccine. The invention is useful for identifying a polypeptide suitable for epitope liberation, where the epitope is a housekeeping epitope. The compositions comprising contentified housekeeping epitopes are useful in vitro in vaccine development or in the generation or expansion of cytotoxic T lymphocyte (CT) to be used in adoptive immunotherapy. The invention is also useful for activating T-cells against neoplastic cells, and cells infected with virus, bacterium, protozoan or fungus. CTL epitopes are identified based on the knowledge that such epitopes are, in fact, produced by the housekeeping proteasome system. Once identified, these epitopes, embodied con the knowledge that such epitopes are, in fact, produced by the conservations. The present sequence is that of a peptide which is related to the method of the invention.
                                                                                                                                                                                                                                                                                                                      Identifying polypeptide suitable for epitope e.g., housekeeping epitope, liberation by contacting substrate polypeptide comprising epitope of interest, with proteasome, and assaying for liberation of epitope.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       lipopeptide, lipid moiety, T helper cell epitope, Th epitope, cytotoxic T cell epitope; CTL epitope; immune response; immunisation; influenza; hepatitis C virus; Listeria monocytogenes; vaccine; cancer; cytostatic; virucide.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  셤
                                                                                                                                                                                                                                                                                                                                    The present invention describes a lipopeptide comprising a polypeptide conjugated to one or more lipid moieties, where the polypeptide comprises a mainto acid sequence that comprises; (a) the amino acid sequence of a T helper cell (Th) epitope and the amino acid sequence of a cytotoxic T cell (TL) epitope, where the amino acid sequences are different; and (b) one or more internal lysine analogue residues for covalent attachment of each of the lipid moieties via the epsilon-amino group or terminal side-chain group of the lysine or lysine or lysine con analogue. Each of the one or more lipid moieties is covalently attached to a terminal side-chain group of the one or more internal lysine cenidues or to a terminal side-chain group of the one or more internal lysine con analogue residues. Also described: (1) producing a lipopeptides; (2) a composition comprising the lipopeptide and an excipient or diluent; (3) eliciting an immune response in a subject; (4) immunising a subject against influenza or hepatitis C virus or Listeria monocytogenes is from a nifluenza virus or hepatitis C virus or Listeria monocytogenes an influenza virus or hepatitis C virus or Listeria monocytogenes and a nifluenza virus or hepatitis C virus or Listeria monocytogenes protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                       New lipopeptide comprising a polypeptide comprising an amino acid sequence of a T helper cell and cytotoxic T cell epitope, useful for preparing a composition for treating or preventing cancer, or hepatitis C
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                (6) treating or preventing cancer; and (7) a vaccine against cancer comprising the lipopeptide, where the CTL epitope is a tumour-specific CTL epitope. The lipopeptide has cytostatic and virucide activities, and can be used in vaccine. The lipopeptide is useful for preparing a composition for treating or preventing cancer, or hepatitis C virus or influenza virus. The present sequence is used in the exemplification of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  immunostimulant; cytostatic; vaccine; tumour-associated antigen SSX-2; SSX-2 antigen; epitope cluster; MHC receptor peptide binding cleft;

The invention describes an isolated nucleic acid (I) comprising a reading frame comprising a first sequence, where the first sequence encodes one or more segments of tumour-associated antigen SSX-2, which comprises a sequence of 188 amino acids (SEQ ID NO: 40), where the first sequence does not encode the complete SSX-2 antigen, and where each segment comprises an epitope cluster, the cluster comprising or encoding at least two amino acid sequences having a known or predicted affinity for a same WHC receptor peptide binding cleft. Also described are: an isolated polypeptide comprising the amino acid sequence encoded in the reading comprising and an immunopantic composition comprising (I) or the polypeptide of [1]. (I) is a nucleic acid encoding a tumour-associated antigen SSX-2 comprising a fully defined sequence of 188 amino acids (SEQ ID NO: 40). The nucleic acid, the encoded antigen, and composition are useful in an uncleic acid, the encoded antigen, and composition are useful in control of an immune response and in treating cancer. Expression cassettes are used in vaccine vectors. This is the amino acid sequence of a T-cell epitope MHC lighting with methods, therapies and compositions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              immunostimulant; cytostatic; vaccine; tumour-associated antigen SSX-2; SSX-2 antigen; epitope cluster; MHC receptor peptide binding cleft; immunospanic composition; immuno response; cancer; vaccine vector; epitope liberation; human leukocyte antigen; HLA A2-specific CTL; cytotoxic T lymphocyte; T-cell epitope.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Novel nucleic acid encoding tumor-associated antigen SSX-2, useful in inducing an immune response and in treating cancer.

frame comprising a first sequence, where the first sequence encodes one or more segments of tumour-associated antigen SSx-2, which comprises a sequence of 188 amino acids (SK-10 NO: 40), where the first sequence does not encode the complete SK-2 antigen, and where each sequence comprises an epitope cluster, the cluster comprising or encoding at least two amino acids sequences having a known or predicted affinity for a same MHC receptor peptide binding cleft. Also described are: an isolated polypeptide comprising the amino acid sequence encoded in the reading frame; and an immunogenic composition comprising (I) or the polypeptide of (1). (1) is a nucleic acid encoding at tumour-associated antigen SSx-2 comprising a fully defined sequence of 188 amino acids (SEQ ID NO: 40). The nucleic acid, the encoded antigen, and composition are useful in chucing an immune response and in treating cancer. Expression casesties are used in vaccine vectors. This is the amino acid sequence of a T-cell epitope MHC ligand associated with methods, therapies and compositions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention describes an isolated nucleic acid (I) comprising a reading
                                                                                                                                                                                                                                                                                                                                                                                                             Novel nucleic acid encoding tumor-associated antigen SSX-2, useful in inducing an immune response and in treating cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  tumour-associated antigen; NY-ESO; epitope cluster; major histocompatibility complex; MHC receptor peptide binding cleft; immunogenic composition; vaccine; sarcoma; fibro sarcoma; osteogenic sarcoma; breast cancer; ovarian cancer; prostate cancer; chronic lenkaemia; Hodgkin's disease; non-Hodgkin's disease; multiple myeloma; Waldenstrom's macroglobulinaemia; epitope.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

The invention describes an isolated nucleic acid (1) comprising a reading frame comprising a first sequence, where the first sequence encodes one or more segments of tunour-associated antigen NY-ESO having a fully defined sequence of 180 amino acids (S1) as given in the specification, where the first sequence does not encode the complete NY-ESO antigen, and where each segment comprises an epitope cluster; the cluster comprising or encoding at least two amino acid sequences having a known or predicted affinity for a same major histocompatibility complex (MHC) receptor affinity for a same major histocompatibility complex (MHC) receptor comprising the amino acid sequence encoded in the zeading frame of (S1); and an immunogenic composition comprising (I) or (II). The following are disclosed: epitope clusters identified in the tumour-associated antigen NY-ESO; expression cassettes for use in vaccine vectors; vectors including house-keeping epitope; and activating T-cell using the vector. (I) is useful in designing recombinant vaccines against tumours such as human sarcoma, fibro sarcoma, osteogenic sarcoma, breast cancer, ovarian cancer, prostate cancer, chronic leukaemia, Hodgkin's disease, non-salorate ancer, chronic leukaemia, protozoa or fungi. (I) cancer, prostate ancer, chronic leukaemia, protozoa or fungi. (I) cancers or manufacture a recombinant vaccine economically and rapidly, by a simple process. The vaccine is highly safe as it consists of only a fragment of the antigen rather than the whole protein. This is the amino caid sequence of a tumour-associated antigen epitope useful in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                         Novel isolated nucleic acid comprising reading frame having first sequence that encodes segments of tumor-associated antigen NY-ESO, usef in designing recombinant vaccines against tumors such as fibro sarcoma,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

PIR 80:* 1: pirl:* 2: pir2:* 3: pir3:* 4: pir4:*

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
